

Microsoft .Net Setup Instructions

Newtin applications require the .NET framework v1.1. To determine if you have it already, and how to get it, visit the Microsoft website's page [What is .NET Framework](#). If you are running Vista, you must install .NET Framework 1.1 as well. .NET 1.1 will run in conjunction with .NET 2.x and 3.x.

Newtin Applications also require that the display settings be set to a minimum of 1024 x 768 and have a DPI setting of "Normal" (96dpi).

Internet Explorer Setup

Newtin requires communication with the server on port 80 (HTTP). By default, Internet Explorer will sandbox all applications and limit their functionality. To allow the Newtin to run, you must setup Internet Explorer to trust the host web site. To do this, follow these steps.

I : Setup Internet Explorer

1. Open Internet Explorer
2. Select "*Internet Options*" from the Tools menu.
3. Click the "*Security*" tab.
4. Click the "*Trusted sites*" Icon.
5. Find in the lower portion of the dialog the area for "*Security level for this zone*".
6. Verify that the level is set to "*Low*". If necessary, click the 'Custom Level' button and at the bottom of the dialog displayed, select "*Low*" and click the "*Reset*" button.
7. Click the "*Sites*" button to open the trusted sites list.
8. If checked, uncheck the "*Require server verification (https:) for all sites in this zone*" option.
9. In the "*Add this Web site to this zone.*" field, enter the host server: <https://.digalert.org>
Click the "*Add*" button to add the site to the Web sites list.
10. Click *OK* to dismiss the Trusted Sites window.
11. Click *OK* to dismiss the Internet Options window.

II : Setup .NET Security Settings

You now must adjust the .NET Security settings for your computer. You may need administrative rights to perform this task depending on you network.

1. Click on the "Start" menu.
2. Click on the "Control Panel" shortcut.
3. Double click the "Administrative Tools" shortcut.
4. Double click the "Microsoft .Net Framework 1.1 Wizard" Icon. If you do not have this please download it from <https://www.microsoft.com/download/en/details.aspx?id=26> or check the following directories for the shortcuts:
Under Windows NT/2000/XP it should be in **C:\WINNT\Microsoft.NET\Framework\v1.1.4322\ConfigWizards.exe** or
Under Windows 98/Me it should be in **C:\WINDOWS\Microsoft.NET\Framework\v1.1.4322\ConfigWizards.exe**
5. Click the "*Adjust .NET Security*" icon.
6. By default "*Make changes to this computer*" is checked, leave it this way.
7. Click the "*Next*" button to continue.
8. Click the "*Trusted Sites*" icon so it is highlighted.
9. Move the slider to the top towards the label "*Full Trust*"
10. Click the "*Next*" button to continue.
11. Verify the settings summary and click the "*Finish*" button to finish.
12. Close the **Adjust .NET Security** program by clicking the red "X" in the top right corner.
